

Seminar HCI and BCI in practice

Session0: Python Tutorial (installation)

Step 1: Download Anaconda

First Way: Go to the website and download

<https://www.anaconda.com/download/success> (06/04/2025)

Second Way: Use command window or powershell

Win-Users:

Win+R → cmd →

```
curl https://repo.anaconda.com/archive/Anaconda3-2024.10-1-Windows-x86_64.exe --  
output .\Downloads\Anaconda3-2024.10-1-Windows-x86_64.exe
```

Mac-Users:

Win+R → powershell →

```
wget "https://repo.anaconda.com/archive/Anaconda3-2024.10-1-Windows-x86_64.exe" -  
outfile ".\Downloads\Anaconda3-2024.10-1-Windows-x86_64.exe"
```

Linux-Users:

Depends on CPU architectures.

<https://www.anaconda.com/docs/getting-started/anaconda/install#macos-linux-installation>

Step 2: Build Environment

Open **Anaconda PowerShell Prompt**

Step0: change your working directory (use:'cd','pushd',etc.)

```
cd H:\BCI_py\Session_00
```

Step1: Check current python version

```
python --version
```

Step2: Check current conda working environment

```
conda info --envs
```

Step3: Create a new conda working environment for BCI-Seminar

```
conda create -n BCI_Seminar python=3.12.7
```

-n: short form for --name

if the cur. py version is already your target version, 'python=3.12.7' can be ignored

Channels:

Step4: Activate the working environment for Seminar

```
conda activate BCI_Seminar
```

Step4-1: Check conda environment again

```
conda info --envs
```

Step5: Install relevant packages (Specify your own path)

```
pip install -r "H:\BCI_py\Session_00\requirement.txt"
```

if you did Step0, then "requirement.txt"

Step6: Install Jupyter notebook in current new working environment

```
conda install jupyter
```

```
pip install notebook
```

Step7: Open notebook file in today's session

```
jupyter notebook "Session_00_student.ipynb"
```
